

Verve Wood

Verve Wood
Guest/Task/Conference

Verve Wood is a versatile shell chair that offers inspiring, affordable, ergonomic seating in the types of flexible spaces where people now meet and work. The original Verve was offered exclusively with a plastic shell. This next generation is a close relative to its plastic cousin, even maintaining the signature grooves on the back of the shell (or "on its back."). Verve Wood offers the same contemporary scaling and comfort that have made the original versions so widely specified.

Designer: Mark Kapka
A graduate from San Jose State University with a degree in Industrial Design, Mark has become a furniture "specialist" with a wide range of work for many different environments including residential, workplace, education, and healthcare. His signature approach is understated, appropriate, and always interesting.
